

Enclosed is a One Time Password token (OTP) that has been provided for this workshop. Access is only temporary and you must return your OTP token to the instructor or any NICS staff at the end of the workshop.

To activate your account, go to <https://portal.nics.tennessee.edu/class/55/student>. Here you must enter your personal information. The username is std0### as written on the outside of your envelope. Once you submit your information to the class web site, your OTP will be ready for you to set a pin and log in. Please follow the directions below to accomplish this:

`ssh std0####@acai.nics.utk.edu`

The first time you log in you will need to set your PIN number. Following are the instructions to do this:

- At the first PASSCODE: prompt enter the 6 digit number displayed on your token.
- You will be asked if you are ready to enter a PIN. <yes>.
- Enter and confirm your chosen PIN number (between 4 and 8 digits). This will now be part of all future PASSCODES.
- You will again be prompted for a PASSCODE. If the number on your token has not changed since the first entry, you must wait for it to generate a new number. Enter your PIN followed by the 6 digit token number. Example: If your pin is 1111 and the token displays 234567, enter 1111234567 at this prompt.

Finally, ssh beacon, and re-enter your password. In the future, you may log into beacon directly:

`ssh std0####@beacon.nics.utk.edu`

Jobs will be submitted under project UT-NTNLEDU.

Thank you,

NICS Staff
